***Election/Restrictions***

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

Species I     Figures 1-9, 12-18, 25-44, 46-49, 52

Species II    Figures 10-11

Species III   Figures 19-24

Species IV    Figure 45

Species V     Figures 50-51

Species VI    Figures 53-64

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The claims are deemed to correspond to the species listed above in the following manner:

Species I      Claims 1-2, 4-7, 9-21, 23-26, 40

Species II     Claim 3

Species III    Claims 8

Species IV    Claims 27-29

Species V     Claims 30-32

Species VI    Claim 22, 33-35, 37-38

Currently no claim is generic.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: The general inventive concept of a remote fixing or release system in which a magnetic field is used attract or repel a locking pin movably located between flexible arms to bias the same into frictional engagement with cavity walls is disclosed in the figures of Species I and not specifically recited in the claim language. Species II is drawn to a "quarter turn" fastener rotated by electromagnetic means. Species III is drawn to a magnetically controlled fluid valve. Species IV is drawn to a method of gluing panels together wherein a magnetic attraction is use to hold said panels in place until the glue hardens. Species V is drawn to the connection of a pair of planar elements having semicircular apertures in which opposite circular ends of a joiner is inserted. Species VI is drawn to the "tongue and groove" and; "male and female" connections for panels.
